PROFESSIONAL SUMMARY

Final-year Software Engineering student and Java Fullstack Developer experienced in building scalable RESTful APIs and UI with Spring Boot and ReactJS. Seeking a **Java Fullstack Fresher** position to learn emerging technologies, accumulate hands-on experience, and contribute to impactful real-world products.

EDUCATION & LANGUAGES

UDN University of Education and Technology (UTE - UDN)

2023 – 2027

Major: Software Engineering

GPA: 3.87 / 4.0

Achievements: Merit Scholarship (3 consecutive semesters, 2024 – 2026)

English: Basic communication — Strong technical reading capability.

KEY PROJECTS

RideBook – Online Ride-Hailing Platform

12/2025 – 06/2026

Fullstack Developer

- Developed functional web UIs using **ReactJS**, managing application state and consuming **APIs** to support core ride-booking, payments, and wallet workflows.
- Implemented secure authentication and role-based authorization using **JWT** and **OAuth2** across all user modules.
- Engineered a real-time dispatch system leveraging **Redis GEO** for ultra-fast spatial querying to match nearby drivers, and **WebSocket/STOMP** for instant live tracking and ride status synchronization.
- Implemented automated **CI/CD pipelines via GitHub Actions** for seamless deployment on **AWS EC2** with **Docker Compose** and **Nginx**.
- Supercharged response times by implementing asynchronous workflows and **Redis** caching, slashing database load by **40%**, achieving **600+ req/s** with a latency of **< 250ms** under local environment stress testing.
- Technologies:** Spring Boot 3, Spring Security, Spring Data JPA, Redis, PostgreSQL, WebSocket, Docker, Nginx, AWS EC2, GitHub Actions, ReactJS, Tailwind.
- Demo:** ridebook.tinhlelaptrinh.id.vn | **GitHub:** github.com/Tinh0804/RideBook

E-Commerce & Auction Platform

05/2026 – 07/2026

Backend Developer

- Developed **50+ RESTful APIs** across auction, wallet, escrow, order, dispute modules and optimized pagination features.
- Engineered a **real-time bidding system** using **WebSocket/STOMP** to synchronize live bids, achieving **<50 ms broadcast latency** while sustaining **500+ concurrent connections** under simulated load.
- Architected an Automated Auction Scheduler using **Redis TTL** to manage auction lifecycles and winner payment timeouts, drastically reducing DB polling overhead.
- Designed a secure digital wallet and escrow payment workflow with balance freezing and webhook validation, ensuring transactional consistency and preventing double spending.
- Implemented **JWT**, **OAuth2** and **OTP/eKYC** authentication while integrating **Cloudinary** to optimize product image storage and delivery.
- Technologies:** Spring Boot 3, PostgreSQL, Redis, Spring Security, Spring Data JPA, JWT, OAuth2, WebSocket/STOMP, Cloudinary, Docker, Nginx, GCP Compute Engine, GitHub Actions.
- Demo:** auctionplatform.tinhlelaptrinh.id.vn | **GitHub:** github.com/Tinh0804/AuctionPlatform

TECHNICAL SKILLS

Programming: Java (Primary), C#, Python, JavaScript.

Frameworks: Spring Boot 3, Spring MVC, Spring Security, Spring Data JPA, ASP.NET Core, ReactJS.

Databases & Cloud: SQL Server, PostgreSQL, Redis, AWS (EC2, S3, IAM, Lambda).

DevOps & Tools: Docker, Git, GitHub, GitHub Actions, Postman, IntelliJ IDEA.

Concepts: OOP, RESTful APIs, WebSocket, Clean Architecture (Basic), Microservices (Basic).
