PROFESSIONAL SUMMARY

Final-year Software Engineering student and Java Fullstack Developer skilled in Spring Boot RESTful APIs and ReactJS interfaces. Completed a Fullstack internship at D-Soft, seeking a **Java Fullstack Fresher** position to apply strong technical fundamentals and deliver impactful software products.

EDUCATION & LANGUAGES

UDN University of Education and Technology (UTE - UDN) 2023 – 2027
Major: Software Engineering | **GPA:** 3.85 / 4.0
Achievements: Merit Scholarship (3 consecutive semesters, 2024 – 2026)
English: TOEIC 725 — Strong technical reading comprehension; elementary conversational skills.

WORK EXPERIENCE

D-Soft JSC 06/2026 – 09/2026
Fullstack Developer Intern

- Built fullstack features for an enterprise **HRM platform**, utilizing **NestJS** for backend APIs and **ReactJS** for UI modules.
- Integrated **AI-assisted workflows** into the development lifecycle, utilizing AI tooling to accelerate code generation, draft automated unit tests, and perform initial code refactoring.
- Collaborated closely in an **Agile/Scrum** environment, participating in daily standups, sprint retrospectives, and conducting **Git** peer code reviews to maintain code quality.

KEY PROJECTS

RideBook – Online Ride-Hailing Platform 12/2025 – 06/2026
Fullstack Developer

- Engineered fullstack workflows from interactive **ReactJS** front-end modules to robust **Spring Boot RESTful APIs**, handling core ride-booking, wallet management, and transactions.
- Engineered real-time driver dispatch using **Redis GEO** for spatial matching and live tracking via **WebSocket/STOMP**.
- Automated **CI/CD via GitHub Actions** for containerized deployment on **AWS EC2** with **Docker Compose** and **Nginx** reverse proxy.
- Supercharged response times by implementing asynchronous workflows and **Redis** caching, slashing database load by **40%**, achieving **600+ req/s** with a latency of **< 250ms** under local environment stress testing.
- Technologies:** Spring Boot 3, Spring Security, Spring Data JPA, Redis, PostgreSQL, WebSocket, Docker, Nginx, AWS EC2, GitHub Actions, ReactJS, Tailwind.
- Demo:** ridebook.tinhleaptrinh.id.vn | **GitHub:** github.com/Tinh0804/RideBook

E-Commerce & Auction Platform 05/2026 – 07/2026
Backend Developer

- Developed **50+ RESTful APIs** for live auction, wallet, escrow payment, dispute, and pagination modules.
- Built real-time bidding via **WebSocket/STOMP**, achieving **<50ms broadcast latency** with **500+ concurrent clients**.
- Architected an Automated Scheduler via **Redis TTL** for auction lifecycles, and an **escrow payment** workflow with fund freezing to prevent double-spending.
- Designed a secure digital wallet and escrow payment workflow with balance freezing and webhook validation, ensuring transactional consistency and preventing double spending.
- Technologies:** Spring Boot 3, PostgreSQL, Redis, Spring Security, Spring Data JPA, JWT, WebSocket/STOMP, Docker, Nginx, GCP, GitHub Actions.
- Demo:** auctionplatform.tinhleaptrinh.id.vn | **GitHub:** github.com/Tinh0804/AuctionPlatform

TECHNICAL SKILLS

Programming: Java (Primary), C#, Python, JavaScript.
Frameworks: Spring Boot 3, Spring MVC, Spring Security, Spring Data JPA, ASP.NET Core, ReactJS.
Databases & Cloud: SQL Server, PostgreSQL, Redis, AWS (EC2, S3, IAM, Lambda).
Architecture & Tools: Docker, Git, GitHub Actions, Postman, IntelliJ IDEA, Clean Architecture, Microservice(basic).
